

MANI NANCHARLA

London, UK | +44 7443 882717 | manikumarnancharla5920@gmail.com

PROFESSIONAL SUMMARY

- Data Engineer with 4+ years of experience building ETL pipelines, data platforms, and analytics solutions across retail, banking, healthcare, and enterprise environments.
- Experienced in developing data ingestion, transformation, and validation workflows using Python, SQL, PySpark, Azure Data Factory, Azure Databricks, Snowflake, and relational databases to process large-scale datasets.
- Delivered trusted analytical datasets, dimensional models, and Business Intelligence solutions using Power BI and Tableau, improving reporting accuracy, data quality, and operational decision-making.
- Skilled in collaborating with Analytics Engineers, Database Engineers, business teams, and stakeholders to optimize data workflows, automate reporting processes, and support data-driven operations.

TECHNICAL SKILLS

Programming & Data Processing: Python, SQL, PySpark, Pandas, NumPy, Data Wrangling, Exploratory Data Analysis

Data Engineering & Pipelines: ETL/ELT Pipelines, Data Ingestion, Data Transformation, Data Integration, Batch Processing, Pipeline Orchestration, Pipeline Monitoring, Error Handling

Cloud & Big Data Platforms: Microsoft Azure, Azure Data Factory, Azure Databricks, Azure Data Lake Storage, Apache Spark, AWS S3, AWS RDS, Google BigQuery

Databases & Data Warehousing: Snowflake, SQL Server, PostgreSQL, MySQL, Relational Databases, Data Warehousing, Query Optimization, Stored Procedures

Data Modeling & Analytics Engineering: Dimensional Modeling, Star Schema, Snowflake Schema, Fact and Dimension Tables, Data Marts, KPI Data Models, Analytics Engineering

Business Intelligence & Visualization: Power BI, Tableau, Looker Studio, DAX, Power Query, Excel Dashboards, KPI Reporting, Data Visualization, Data Storytelling

DataOps & Development Tools: Git, CI/CD, Linux, JIRA, Confluence, ServiceNow, Postman, REST APIs, JSON, CSV

Data Quality, Governance & Security: Data Quality Management, Data Validation, Data Reconciliation, Metadata Management, Data Lineage, Identity and Access Management, Security Logging, Audit Support, Compliance Reporting

PROFESSIONAL EXPERIENCE

Data Engineer

May 2026 - Present Sopra

Steria (Client: NHS Shared Business Services) | Southampton, UK

- Engineered Azure Data Factory ETL pipelines to consolidate NHS finance, supplier, service, and operational data from multiple source systems, improving daily dataset availability by 30% for reporting and service-management teams.
- Consolidated SQL Server extracts and CSV-based operational files into curated Azure Data Lake datasets, reducing fragmented manual data preparation by 25% across recurring NHS SBS reporting workflows.
- Automated Python and SQL validation routines for missing values, duplicate records, schema mismatches, and reconciliation exceptions, improving downstream Power BI reporting accuracy to 98%.
- Optimized complex SQL joins, aggregations, filters, and transformation logic supporting financial and service-performance KPIs, decreasing monthly report-processing time by 22%.
- Reconciled invoice, supplier, payment, and operational datasets with Finance and Business Intelligence teams, resolving approximately 90% of source-to-report discrepancies before stakeholder publication.
- Standardized Git, JIRA, Confluence, and ServiceNow controls for pipeline changes, data incidents, and deployment documentation, establishing traceability across 100% of production data updates.

Data Engineer

Jan 2025 - Apr 2026 Truist

Bank | USA | Remote

- Architected Azure Data Factory ETL/ELT pipelines to integrate customer, account, transaction, branch, and operational data, supporting the reliable processing of more than 1.5 million financial records each day.
- Developed PySpark, Python, and SQL transformations in Azure Databricks to cleanse, standardize, and enrich banking datasets, reducing rejected records by 28% across downstream analytics workloads.
- Processed high-volume data from SQL Server, Snowflake, REST APIs, and flat-file sources through scheduled ingestion workflows, improving daily dataset-delivery reliability to 98.5%.
- Modeled customer, transaction, account, and branch data using star schemas, then connected Snowflake datasets to Tableau, reducing duplicate reporting logic by 30% and improving risk visibility by 25%.
- Tuned complex SQL queries, window functions, joins, aggregations, and filtering logic across Snowflake and SQL Server, shortening regulatory and operational report runtimes by 32%.
- Implemented automated data-quality checks, source-to-target reconciliation rules, and exception-handling controls, increasing trusted financial reporting accuracy from 94% to 98%.
- Orchestrated Git-based DataOps and CI/CD workflows for pipeline code, configuration changes, and deployment validation, reducing production release-related failures by 24%.
- Partnered with Analytics Engineers, Database Engineers, risk teams, and business analysts to define mappings, validation rules, and acceptance criteria, accelerating requirement-to-production delivery by 20%.

PKI Engineer

Feb 2024 - Aug 2024

Randstad India | Hyderabad, India

- Centralized certificate, ownership, issuer, expiry, revocation, and IAM metadata in SQL Server, improving operational visibility across more than 50 enterprise applications and infrastructure workloads.

- Scripted Python-based certificate lifecycle reporting to extract, validate, and summarize expiry and ownership data, reducing spreadsheet-driven compliance preparation effort by 60%.
- Structured relational database models for X.509 certificate, authentication, ownership, and renewal data, decreasing duplicate and inconsistent metadata records by 35%.
- Monitored certificate-expiry trends, ownership gaps, and compliance exceptions through Power BI dashboards, reducing unexpected certificate-expiration incidents by 30%.
- Investigated authentication failures and certificate anomalies using SQL, Python, Linux logs, and root-cause analysis, shortening average incident-resolution time by 25%.
- Validated certificate records through automated expiry-date, ownership, duplication, and status checks, improving audit and compliance-reporting accuracy to approximately 97%.
- Coordinated with IAM, infrastructure, audit, and security teams to resolve certificate-data mismatches and ownership gaps, closing 90% of identified exceptions within agreed timelines.
- Documented certificate onboarding, renewal, revocation, monitoring, and incident procedures in Confluence, reducing dependency on senior engineers by 40% during recurring support activities.

Data Engineer

Jul 2021 - Feb 2024

Talentcare Pvt. Ltd. | India | Remote Client Domain: Retail Data / Analytics Project: Retail Sales, Inventory and Customer Analytics Data Platform

- Built Python and SQL ETL pipelines to ingest sales, inventory, product, customer, supplier, and store data, processing more than 500,000 retail records every month.
- Integrated CSV files, REST APIs, PostgreSQL, and MySQL sources into standardized analytical datasets, reducing manual data collection and consolidation effort by 35%.
- Transformed raw transactional and operational data using Pandas, PySpark, and SQL to standardize product, customer, and store attributes, improving usable record completeness from 91% to 97%.
- Designed dimensional models with sales, inventory, product, customer, and location fact-dimension tables, reducing recurring analytical query execution time by 27%.
- Strengthened pipeline reliability through source-to-target reconciliation, error logging, restart procedures, and record-count validation, achieving approximately 97% successful scheduled data processing.
- Delivered Tableau dashboards for sales performance, stock movement, product demand, and store-level KPIs, reducing weekly management-report preparation effort by 30%.

PROJECTS

NHS Supplier Payment Reconciliation and Cost Analytics Solution

- Solved delayed supplier-cost reporting by integrating invoice, payment, service, and operational data through Azure Data Factory, improving consolidated dataset availability by 30%.
- Detected duplicate invoices, missing supplier references, and payment mismatches using Python and SQL reconciliation rules, capturing 92% of exceptions before monthly financial close.
- Shortened manual finance review by delivering reusable Power Query and Excel datasets for supplier costs and service variances, reducing exception-analysis time by 25%.

Banking Regulatory Data Quality and Lineage Monitoring Framework

- Addressed inconsistent regulatory data by building a PySpark and SQL reconciliation framework that compared more than 1.2 million daily customer, account, and transaction records across source systems and Snowflake.
- Traced missing, duplicate, and mismatched records through metadata mappings, control totals, and exception classifications, improving trusted reporting accuracy to 98.5%.
- Presented reconciliation failures, data lineage gaps, and transaction exceptions through Tableau dashboards, reducing investigation time by 30% and giving risk teams clearer visibility into reporting issues.

Smart Retail Sales and Inventory Decision Support Platform

- Resolved fragmented retail reporting by consolidating more than 600,000 sales, inventory, product, and customer records through Python, SQL, and Pandas, improving usable data completeness from 91% to 98%.
- Replaced manual spreadsheet-based KPI preparation with Power BI semantic models and DAX measures for revenue, margin, stock turnover, and demand, reducing weekly reporting effort by 35%.
- Identified slow-moving products and regional demand gaps through drill-through dashboards and trend analysis, helping reduce excess inventory by approximately 18% across selected categories.

EDUCATION

Master of Science in Information Systems

University of Portsmouth | Portsmouth, UK

Bachelor of Technology in Electronics and Communication Engineering

Swarna Bharathi Institute of Science and Technology | India
